

[msmtp download page](#)

다음과 같이 설치했음.

```
./configure --prefix=/usr --sysconfdir=/etc --localstatedir=/var
make
make check
sudo make install
sudo install -vm644 /etc/msmtprc
```

/etc/msmtprc내용
강조부분 수정할것.

```
# A system wide configuration file is optional.
# If it exists, it usually defines a default account.
# This allows msmtp to be used like /usr/sbin/sendmail.
account default

# The SMTP smarthost
host your.mailhost

# Use Plain
port 25
auth off

# Construct envelope-from addresses of the form "user@oursite.example"
# from user@your.domain
# Do not allow programs to override this envelope-from address via -f
allow_from_override off
# Always set a From header that matches the envelope-from address
set_from_header on

# Syslog logging with facility LOG_MAIL instead of the default LOG_USER
syslog LOG_MAIL
```
